

PAS 1075:2009-04 (D,E)

Rohre aus Polyethylen (PE 100-RC) für alternative Verlegetechniken, Technische Anforderungen und Prüfung

Pipes made from Polyethylene for alternative installation techniques_ - Dimensions, technical requirements and testing

Contents	Page
0 Introduction	20
1 Areas of application	20
2 Normative references	21
3 Technical terms and definitions	22
3.1 Material designation.....	22
3.2 Classification of the piping construction	22
3.2.1 Pipe with dimensions according to DIN 8074/ISO 4065	22
3.2.2 Plain solid wall pipe of PE 100-RC (Type 1)	22
3.2.3 Pipe with integrated protective layers of PE 100-RC (Type 2)	22
3.2.4 Pipe with dimensions according to DIN 8074/ISO 4065 with an additional external protective layer (Type 3)	22
3.3 Influencing factor	22
4 Testing and supervision.....	23
4.1 Generalities concerning testing procedures and testing laboratories.....	23
4.2 Testing (approval, quality control assurance).....	23
4.2.1 Material approval testing	23
4.2.2 Quality assurance of the material.....	24
4.2.3 Pipe approval testing.....	25
4.2.4 Retesting of the pipe	25
4.2.5 Test procedures	25
5 Marking	26
6 Explanations	26
6.1 General safety level.....	26
6.2 Correlation FNCT – Point Loading Test	26
Annex A1	27
Description of the Full Notch Creep Test (FNCT)	27
Annex A2	28
Description of the Two Notch Creep Test (2NCT).....	28
Annex A3	29
Description of the Point Loading Test (PLT).....	29
Annex A4	30
Description of the Penetration Test	30
Annex A5	32
Description of the Thermal Ageing Test.....	32
Annex A6	33
Description of the External Protective Layer Scratch Test	33
